

The Enhancer

SEPTEMBER 2026

BENCH TOOLS YOU’LL NEED

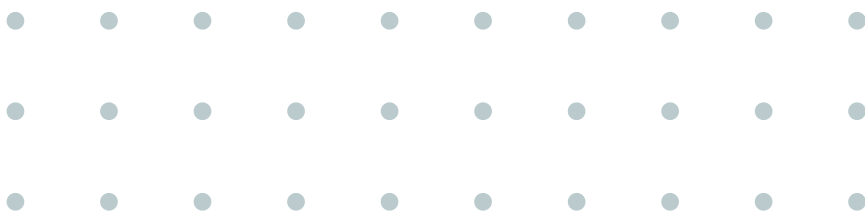

Here are the essentials:

- Saw frame and blades
- #2 flat file
- Needle files – triangle and round profiles will be most useful
- **OPTIONAL** – a rotary file for use in the flexshaft, [like this one](#)
- Dapping block and daps – make sure the block depressions are large enough to form a one inch circle ([this block from Splenor on Amazon](#) looks pretty nice!)
- A forming dish [like this one](#) or [this one](#) – you’re looking for a shallower curve than what you get in a dapping block
- [Punches](#) for the forming dish or a urethane or rubber [forming mallet](#) (I especially love [this Bonny Doon mallet](#) if you’re able to make an investment!)
- Circle cutters OR circle templates – you’ll need a one inch and 5/8 inch
- Flexshaft and finishing accessories
- Sandpaper assortment
- Small ball burs
- Cup burs OR twin-cut burs, sized for wire gauges used
- Wire cutters
- Wrap n’ Tap pliers OR bezel mandrels
- Nylon mallet
- Ultra-fine Sharpie marker
- Two part epoxy (I prefer [Epoxy 330](#))
- 3mm tube setting punch
- **OPTIONAL** – round diamond needle file (highly recommended if you need to alter the size of your pearl hole!)

YOUR SOLDERING SETUP

This project can be completed with any torch setup you’re comfortable with, except a small creme brulee torch. A large butane torch is fine, as well as your usual soldering essentials.

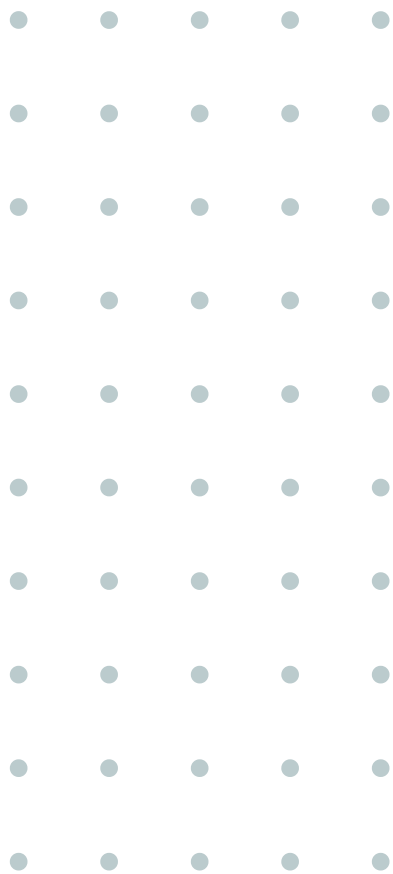

For most of this project, you can use any type of solder, flux, and soldering surface you prefer.

MATERIALS

- **22ga sterling sheet** – you’ll need two pieces roughly 1-1/4 inch square; one of these can be patterned if you would like the front of your enhancer to have a design
- **3mm sterling silver tube setting**
- **3mm faceted stone of your choice**
- **3–4mm half-drilled pearl**
- **14ga or 16ga sterling wire** – about 1-1/2"
- **18ga or 20ga sterling wire** – less than 1/2" (size will depend on the hole size of your pearl)
- **OPTIONAL** – a strand of pearls or beads

NOTES
